Feedback while testing:

- The app is blazingly fast! so fast that its hard for the user to recognize anything happened.
  - After importing data, an import summary along w/ import status would be helpful so the user knows what was imported, or if there were any errors.
  - gemini activity upload had the most notable addition to the dashboard (&52 prompts).
  - Other imports, Claude / ChatGPT might not be working right.
- I attached the files.
